

## Vending Solution

### Tap & Go Cashless Vending

The days of fumbling for loose change at the vending machine are over. There's no need to secure, remove, and count all that cash from the machines either.

Integrate cashless payments to vending machines with our vending solution, letting customers make the most of their time with a hassle-free, fast method of payment.

"We have over 100 vending machines in our estate and Systopia's cashless solution has taken away the cost to maintain the coin acceptors and remove cash."

## Easy to Install

We can integrate with existing or new vending machines at your site. The machines can even retain cash and credit card payment devices, as our system is capable of managing both through a single machine. The Card Reader acts as a data converter to allow simple coin operated machines for cashless use.

## Tap & Go Payments

Using our sophisticated Card Reader, customers can simply present their cashless ID card or wristband to the vending machines and payment is taken instantly. Vending machines come with a range of payment protocols which are required in order to interface into our payment device. Uniquely we can work with all types of protocol, including MDB, BDV, CCI and Executive.

## Real Benefits

- Every sale is captured in our comprehensive reporting software.
- Can be utilized to track sales, busy times and stock preferences.
- Reduce line times on average by 25%.
- Eliminate the cost and resources needed to manage and remove cash from site.
- Can be retro-fitted to existing machines or to new at the factory.
- Works with all payment protocols.
- Can be integrated with access ID cards.
